FIT9136 - Week 4 Applied Session

Table of Contents:

*Exercise 1: Playing with String

String #String_Manipulation #String_functions

> This tasks focus on using the string data type and it's related functions. * **Create a variable named "demo_string" that has value "Hello World"**

```python
In [3]:  # Your solution goes here
         demo_string = "Hello World"
```

```python
In [ ]:
```

> * **What is the length of the string that is stored in "demo_string"?**

```python
In [4]:  # Your solution goes here
         print(len(demo_string))
```

```
11
```

> * **Write the word "Hello" and "world" separately in a different lines of output window, like this:** Hello World

```python
In [6]:  # Your solution goes here
         print(demo_string[:5])
         print(demo_string[-5:])
```

```
Hello
World
```
